POOLMASTER®

We Make Water Fun!

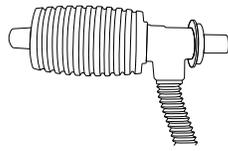

770 Del Paso Road, Sacramento, CA 95834-0308

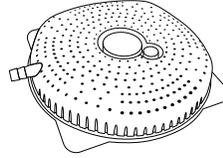

Contents

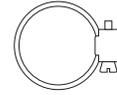

15' Drain Tube

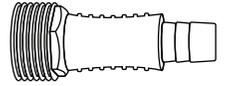

Siphon Pump

Drain Head

Hose Clamp

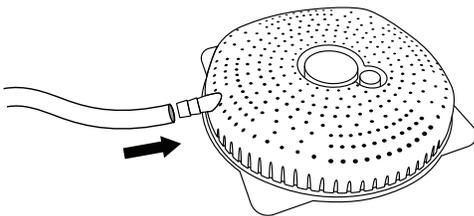

Hose Coupling

Instructions

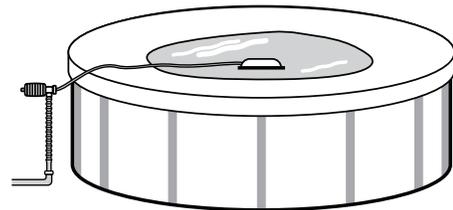

1. Attach drain tube to drain head and place in the center of your pool cover.
2. Attach siphon pump to the drain tube and allow it to hang over the pool side. Drain tube should be kept lower than drain head.
3. Squeeze the siphon pump until water begins to flow. Water flow stops when majority of the water has been drained from the cover.
4. To add more length and direct water farther than 15', connect hose coupling and hose clamp to garden hose. Hose clamp should go over end of siphon pump first. Extend the garden hose to an appropriate area for drain flow.
5. Squeeze the siphon manually as needed to drain as much of the excess water as possible.

Note: Not all water will be evacuated.
